SAFETY CULTURE AND SAFETY PERFORMANCE

How safety culture and leadership
help improve performance

A research-intervention process addressed to Middle Management

In 2021 Italo undertook an assessment of the positive safety culture, using the questionnaire developed by ERA and an in-depth evaluation of Work-related Stress. The results highlighted some similarities.

Italo thus embarked on a process of disseminating data with all management, by the World café methodology and has developed a psycho-social training aimed at middle managers, with the objective of improving communication, coordination and leadership skills.
