SEVILLA, OCTOBER 16-21, 2022

MAKING BEST USE OF DATA AND INTELLIGENCE IN DETERMINING REGULATORY ACTIVITIES ON GREAT BRITAIN'S RAILWAYS

IRSC 2022
INTERNATIONAL RAILWAY SAFETY COUNCIL
SEVILLA, OCTOBER 16-21, 2022

Rail Safety Directorate (RSD) – what do we do?

We regulate health and safety for the entire mainline rail network in Britain, as well as London Underground, light rail, trams and the heritage sector:

- provide health and safety guidance and conducting research to promote continuous improvement
- publish reports on the rail industry's health and safety performance
- carry out inspections to ensure that the train and freight operating companies and Network Rail manage both passenger and occupational health and safety risks appropriately
- investigate breaches of health and safety regulation on the railways
- take informal and formal enforcement action, including improvement notices and prosecutions

Rail Safety Directorate (RSD) – what do we do?

- We regulate health and safety for the entire mainline rail network in Britain, as well as London Underground, light rail, trams and the heritage sector:
 - provide health and safety guidance and conducting research to promote continuous improvement
 - publish reports on the rail industry's health and safety performance
 - carry out inspections to ensure that the train and freight operating companies and Network Rail manage both passenger and occupational health and safety risks appropriately
 - investigate breaches of health and safety regulation on the railways
 - take informal and formal enforcement action, including improvement notices and prosecutions

**ORR Strategic Objective No 1:
a Safer Railway**

A Safer Railway

We seek assurances across all the sectors we regulate by confirming that duty holders are controlling risk. We track these risks and overall health and safety performance using data, industry risk modelling, and intelligence from our inspections, audits, and investigations. This gives us a picture of the risk control and management maturity of each duty holder, sector and the rail industry as a whole, and how they are changing over time.

Identifying and prioritising significant risks helps us to focus our resources where we can make the greatest impact on reducing risk. We structure our inspections, audits and activities accordingly.

Use of data to support decision making on priorities

- RSD has access to lots of data, both internal and external:
 - RSSB data
 - RDG data
 - RIDDOR data
 - Daily logs
 - Inspection reports
 - RM3 End of Year reports
 - Complaints
 - Investigations
- Reality is we did not do much with any data in terms of intelligence and/or analysis

IRSC 2022
INTERNATIONAL RAILWAY SAFETY COUNCIL
SEVILLA, OCTOBER 16-21, 2022

But there were problems

Handwritten mathematical notes and diagrams:

- Top left: $\int = \oint E \cdot t$ with a circular diagram.
- Top middle: $f(w) = \int_0^{\infty} f(x) e^{-2r \cdot xw} dx \frac{dt}{dt}$
- Top right: $\nabla \cdot E = 0$, $\nabla \times E = -\frac{1}{c} \frac{\partial H}{\partial t}$, $\nabla \cdot H = 0$, $\nabla \times H = \frac{1}{c} \frac{\partial E}{\partial t}$, $\nabla^2 \Psi = -4\pi \rho$
- Middle left: $\rho \left(\frac{\partial v}{\partial t} + v \cdot \nabla v \right) = -\nabla p + \nabla \cdot T + f$
- Middle center: $H = -\sum p(x) \log p(x)$ with a small graph of a wave.
- Middle right: $\frac{1}{2} G^2 S^2 \frac{\partial^2 V}{\partial S^2} + r S \frac{\partial V}{\partial S} + \frac{\partial V}{\partial t} - r \cdot V = 0$
- Bottom left: $TC(Q, q_i, m_i) = \sum_{i=1}^n \left[\frac{D_i}{m \cdot q_i} S_i + c_i \cdot D_i + \frac{q_i \cdot H_i \cdot v}{2} \left(m_i \left(1 - \frac{D_i}{P_i} \right) - 1 + 2 \frac{D_i}{P_i} \right) \right]$
- Bottom center: A diagram of a 3D rectangular prism with dimensions 50^2 and 10^2 , and a coordinate system. Below it is the equation: $\int (\log \sin x)^2 dx = \frac{\pi}{2} \left\{ \frac{\pi^2}{12} + (\log 2)^2 \right\}$
- Bottom right: A matrix equation: $\begin{bmatrix} \frac{d \Delta p(s, \phi)}{d \phi} \\ \frac{d \Delta M(s, \phi)}{d \phi} \end{bmatrix} = \begin{bmatrix} \beta & -\beta \\ -\beta & 0 \end{bmatrix} \begin{bmatrix} \Delta p(s, \phi) \\ \Delta M(s, \phi) \end{bmatrix}$

Did not meet the needs of all users, and without confidence in the data or the process, unsupported professional "judgement" usually won the day

End result did not have confidence of anyone involved

- No clear link to any data or evidence source to support priorities
- Changing definitions every year meant could not identify trends
- Over-reliance on professional judgement as sole deciding factor
- We were (sort of) confident we were (probably) looking at the right topics (but could not prove it if questioned)
- We needed a clear audit trail to explain why we prioritized some topics over others

Risk	Rank	Change
Failure – slip of cutting/embankment	1	↑
Failure – tunnel, bridge, culvert, station <u>etc</u>	2	↑
Train – striking animal	3	↑↑
Rail – buckle	4	↑
Permanent way – flooding (ballast)	5	↑
SPAD	6	↓
Broken rail (<u>incl fishplates</u>)	7	↑↑
Struck by train in depot (shunting)	8	↑
Track worker safety (struck by train on running line)	9	↓
Electrical safety – workforce	10	↑
Signalling irregularities	10	↑
Bridge strike	12	↑↑
Train – striking other objects (e.g. trees)	13	↑

How did we deal with these multiple challenges?

DATA

SORTED

ARRANGED

PRESENTED VISUALLY

EXPLAINED WITH A STORY

If at first
you do not
succeed...

- **2020** tried to improve existing RARR process and use a particular data set (RIDDOR) to benchmark hazards and risks – **FAILED**, but **senior leaders were supportive and understanding**
- **2021** started from complete scratch, changed name from RARR to Risk Profiling
 - worked with ORR Analysis Team to identify and better present data to support decision making
 - removed the complicated weightings
 - Used an agreed list of hazard topics (linked to RSSB Safety Risk Model (SRM) categories) to allow us to spot trends longer term
 - after a lot of consultation with stakeholders to reassure them professional judgement remained an important component – **BETTER**
- **2022** went to an outside contractor to build us a properly designed process:
 - Benchmarked against other regulators both in GB and internationally
 - Keep it simple was the mantra
 - Lots of engagement and identified RSD risk champions who sold it to their colleagues

Now have a “best in class” process for our risk profiling

The benchmarking process facilitates comparison of risk profiling initiatives

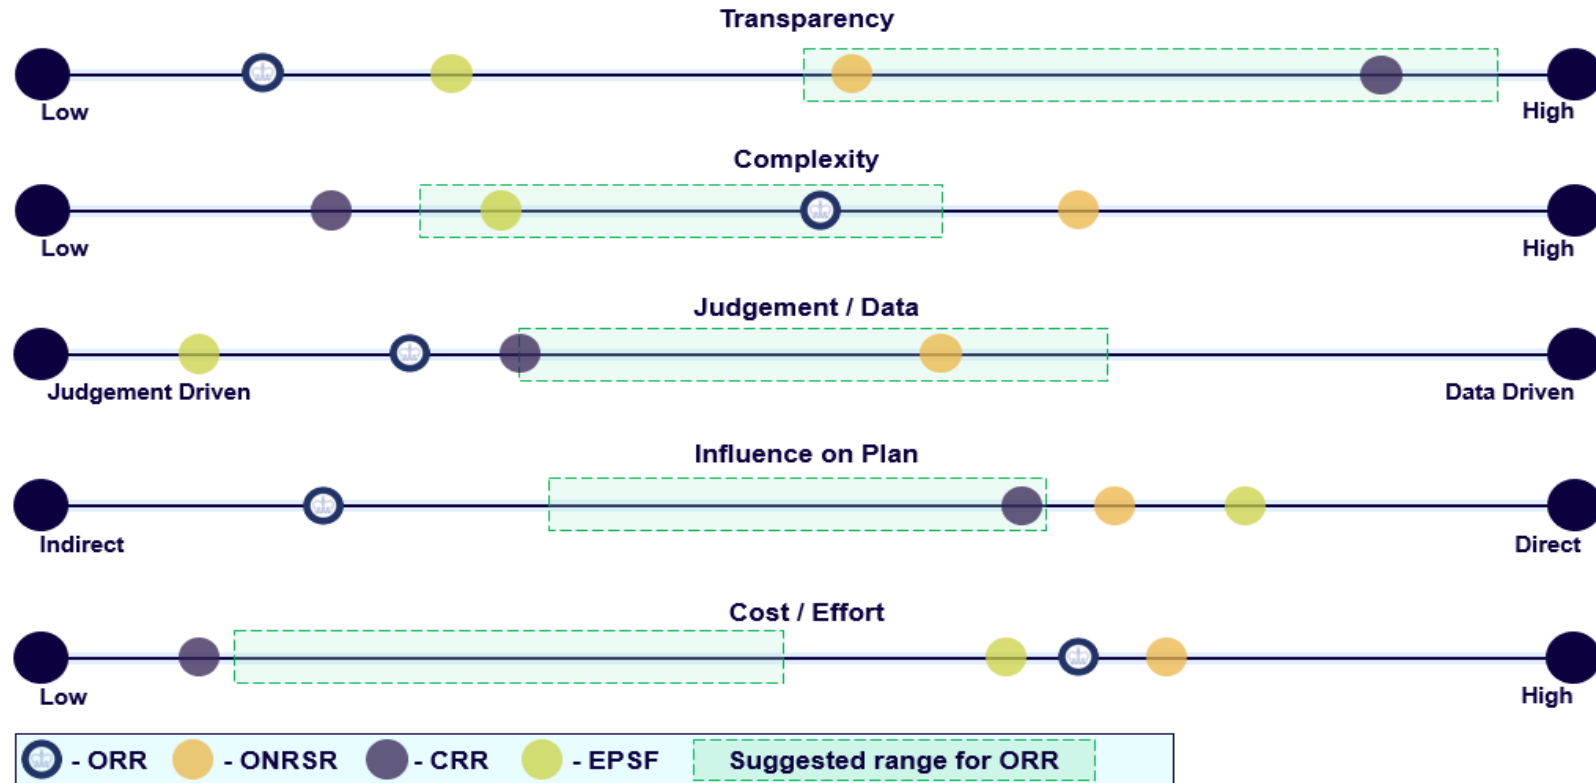

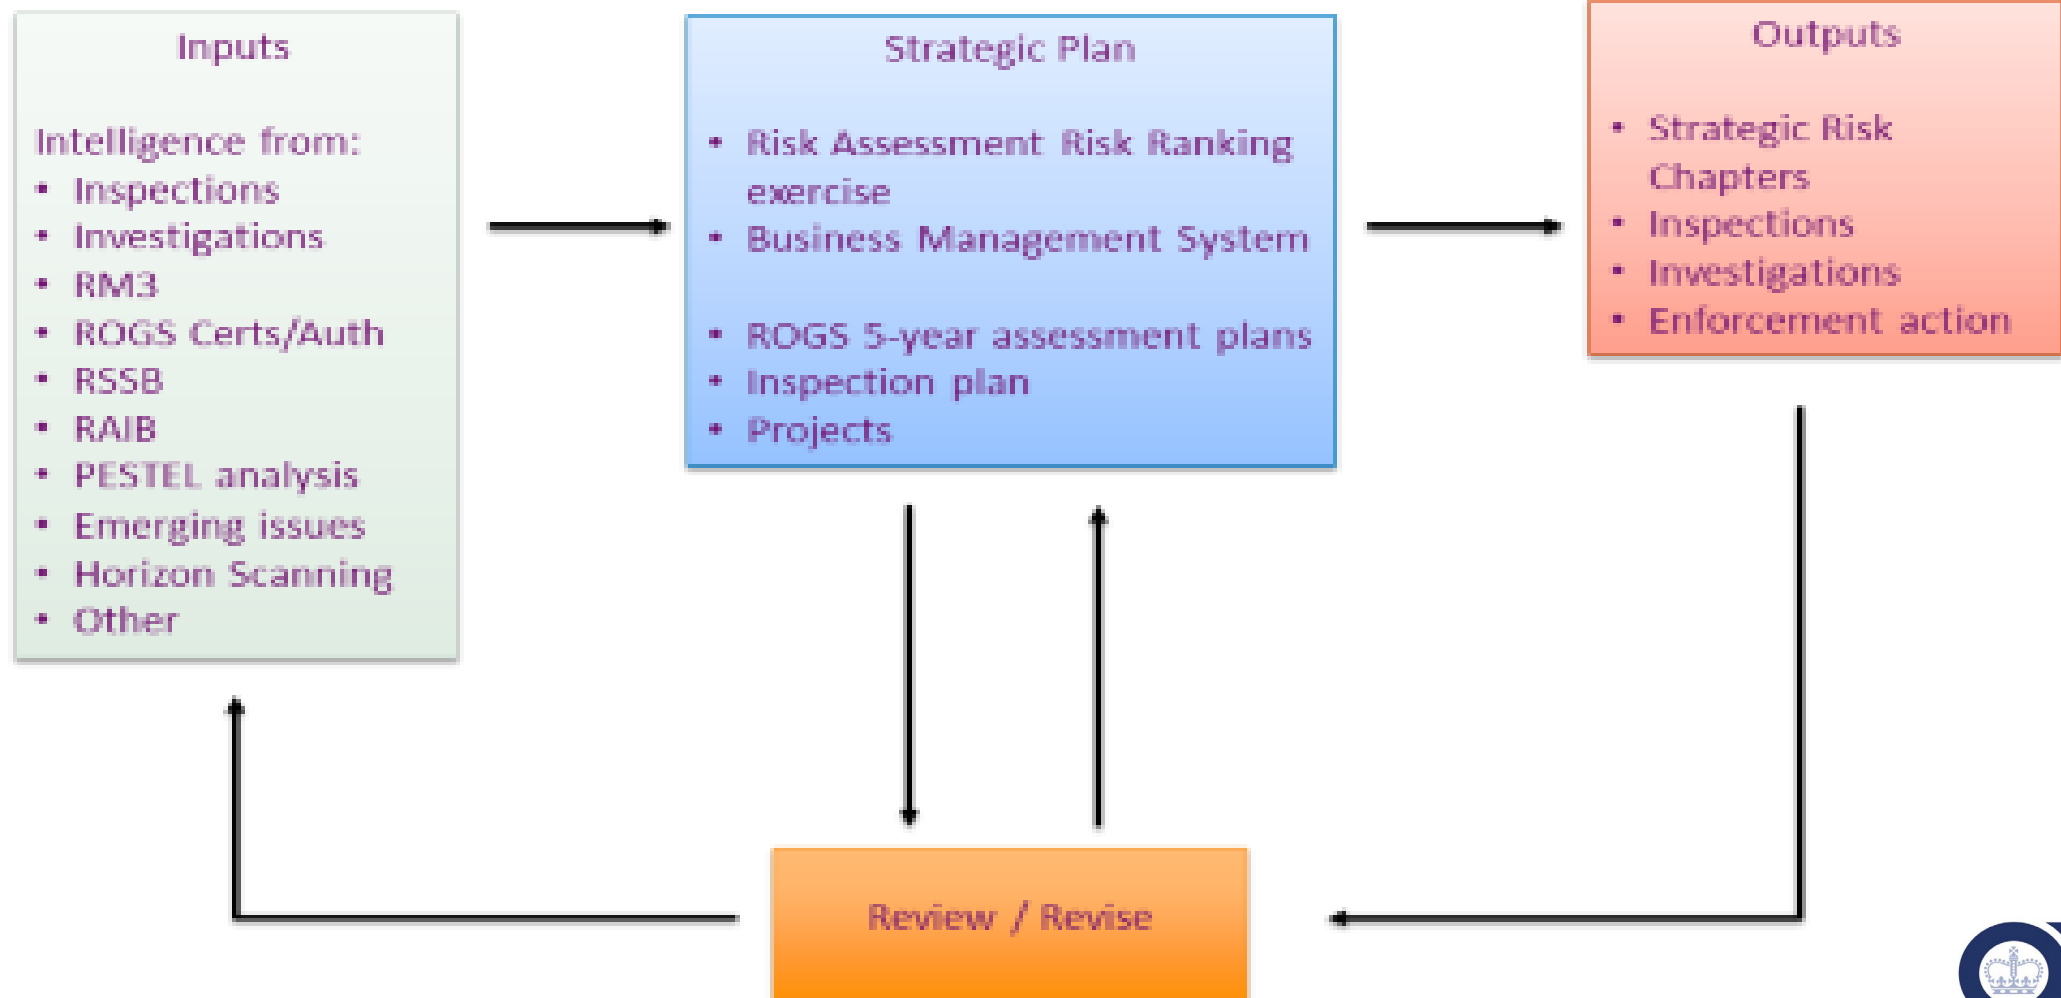

Figure 1: Risk Profiling Lifecycle Plan – Do - Check - Act

Aims and objectives of new risk profiling exercise

A process that draws from all of the credible sources of information available to us:

Inspectors' experience

Inspection findings

Safety reports

A tool that facilitates the methodical assimilation of all the factors above

A record of the deliberation and decisions made...

...and why

Matrix 1: Total actual harm/ worst credible harm matrix – this forms the starting point for determining the “inherent threat score”

		Total Actual Harm (Annual)					
		FWI Range	FWI Range	FWI Range	FWI Range	FWI Range	
		0	0 – 0.1	0.1 - 1	1 - 10	10 +	
Worst Credible Harm	Catastrophic	<i>Fatality or multiple fatalities expected</i>	2	3	4	5	5
	Major	<i>Severe injury or disability likely; some potential for fatality</i>	2	3	4	5	5
	Moderate	<i>Lost time or injury likely; potential for serious injury; small risk of fatality</i>	2	3	3	4	4
	Minor	<i>First aid required or small risk of serious injury</i>	1	2	3	3	3
	Negligible	<i>No injury or health effect</i>	1	1	2	2	2

Matrix 2: Total industry performance trend/ industry exposure matrix – this forms the starting point for determining the “industry capability score”

		Industry Performance Trend					
		Improving		Static	Worsening		
		10%+	0% - 10%	0%	0% - 10%	10%+	
Industry Exposure	Catastrophic	<i>Fatality or multiple fatalities expected</i>	2	3	4	5	5
	Major	<i>Severe injury or disability likely; some potential for fatality</i>	2	2	3	4	5
	Moderate	<i>Lost time or injury likely; potential for serious injury; small risk of fatality</i>	1	1	1	3	4
	Minor	<i>First aid required or small risk of serious injury</i>	1	1	1	2	3
	Negligible	<i>No injury or health effect</i>	1	1	1	2	2

	Hazard:	Track integrity lost (Infrastructure Asset Integrity)			
		Guide question	Score	Data	Judgement
Inherent threat	Use Matrix 1 to determine threat level based on data.	5	Yes	Yes	Specialist Team Report, SHEP data, Chief Engineers Report
	Is there a recent negative trend in total actual harm?	0	Yes	Yes	Specialist Team Report, SHEP data, Chief Engineers Report
Industry Capability	Use Matrix 2 to determine how the main duty holder manages with respect to this risk?	4	Yes	Yes	Medium as problems with delivering train borne inspection
	Are there any concerns about how easily the industry can influence control of this hazard?	1	Yes	Yes	Impact of climate on track geometry, imminent modernising maintenance changes, industrial relations issues, concerns around key staff competence, track recording runs
	Are there any concerns about the capability/maturity of the main duty holders leadership with respect to this hazard? (informed by RM3)	0	No	Yes	Chief engineers report, safety management systems not being implemented - competence management and modernising maintenance
	Are there any concerns about the effectiveness of the main duty holder SM systems with respect to this hazard? (informed by RM3)	1	Yes	Yes	Chief Engineers Report - modernising maintenance and competence management
External Pressure (Stakeholder Interest)	Is there a high expectation from society for this hazard to be managed?	1	No	Yes	
	Is there a particular government interest in managing this hazard robustly?	1	No	Yes	
	Is there particular union or workforce interest in managing this hazard robustly?	1	No	Yes	
	Is there particular industry interest in managing this hazard robustly?	1	No	Yes	
Internal Pressure	Are there any concerns about ORR's recent history of regulating this threat/hazard?	0	No	Yes	
	Are there any concerns with RSD's particular ability to influence change in this area effectively?	1	No	Yes	Impending staff changes may affect our capability
	Are there any concerns about ORR's particular ability to influence change in this area effectively?	1	No	Yes	See above
	Are there any concerns about ORR's understanding of the hazard and its effects/mitigations?	0	No	Yes	
	Does ORR lack an enforceable legal duty in this area?	0	No	Yes	

Potential breakdowns:

- By sector
- By public, passengers and workforce

Pay particular attention to priority 3 risks – some still have a potentially high inherent threat and they are often overlooked. Should be reviewed at least once a year (we do not want 'neglected risk areas')

- The aim is to provide an overall risk map of key hazards
- The map is dynamic & changes based on the results of risk profiling activity
- Three parameters:
 - Industry capability
 - Internal and external factors
 - Inherent Threat
- Items at the top right will be priority areas for attention
- There would be concern if hazards with high inherent risk appear in the top half of the Map
- 'Good' is items moving to the bottom left

Train Accident

Workforce

Passenger and Public

- Animals on the line (Infrastructure Asset Integrity)
- Contaminated track - low adhesion and signalling failure (Infrastru...)
- Critical train component Failure (Infrastructure Asset Integrity)
- Earthworks failure (Infrastructure Asset Integrity)
- Major structure (e.g. viaduct) failure (Infrastructure Asset Integrity)
- Objects falling from structures/lineside equipment/ other trains in ...
- Objects placed on the line (Public Behaviour)
- Over speeding (Train operations)
- Road vehicle in the path of a level crossing – car driver (Level Cros...)
- Road vehicle in the path of a train at level crossing – signalling (L...)
- S&T Wrong Side Failure (Infrastructure Asset Integrity)
- Signaller failure - human error (Train operations)
- Signalling system failure (Infrastructure Asset Integrity)
- Software failure - on train (Rolling Stock asset integrity)
- Track integrity lost (Infrastructure Asset Integrity)
- Train passing at the end of its authority (Train Operations)
- Unfit for work – safety critical workers (Workforce Health and Wel...)
- Vegetation on the line/ in swept envelope (Infrastructure Asset Int...)

NOTE: Hazards with the same risk ranking may not appear on main graph. Use Hazard Filter box below to view each hazard separately.

Hazard

All

Mainline Risk Profiling - Train Accident

Benefits of the new risk profiling exercise

- Will ensure we have a transparent, accountable and targeted decision-making process
 - Can show what evidence is used to support decisions
- Has the confidence of the users and was not “imposed” top-down on them but instead developed in consultation with them
- It is ok to get it wrong, to take a risk – provided you learn the lessons!
- Sometimes keeping it simple is the way forward
 - Reduced the number of hazard topics from several hundred to about 40
- Now have a properly designed, best in class risk profiling process, which can be adapted to focus on needs of the different sectors: Mainline, Heritage, Transport for London, Trams and Light Rail
